

Your revenue in the era of MIPS relies significantly on creating an internal workflow supportive of streamlined reporting. Performance year 2019 is an ideal time to establish this process, identifying necessary partners before penalties increase and regulations tighten.

## SPREADSHEET UPLOAD

The spreadsheet upload option requires the creation of a standard spreadsheet file (.csv, .xls, .xlsx), either by manually creating a file or by export from an EHR, EMR, or billing system. Spreadsheets must include **patient IDs, gender, dates of birth, dates of service, CPT codes, and ICD-10 codes**. Other code types (HCPCS/CPT II, SNOMED, LOINC, ICD-9, RxNorm, NDC, CVX) can be included, as MIPSPRO is able to map these for many of the most popular measures in our system. MIPSPRO also accepts “English” codes, such as “Met”, “Not Met”, or “Exception”, for some measures through either spreadsheet uploads or manual entry. Vitals data (A1C, BMI, BP, Height/Weight, GAD7, PHQ9) can also be manually entered for some measures.

For the patient visit to be complete, codes that define the denominator (visit eligibility) and numerator (performance) must be included. If your system is only capable of exporting the requirements partially, you can manually adjust the data at any time.

## STANDARD FILE FORMAT

If you can easily export measure performance data in an industry standard file format (**HL7, QRDA I, 837 / 835 billing files**), this will allow for extremely fast and simple upload into MIPSPRO. These files cannot be edited until they are uploaded into MIPSPRO, but you will be able to view and edit your data once it has been processed by the system.

## DIRECT EHR INTEGRATION

MIPSPRO is integrated with many industry leading EHR systems, enabling a direct feed between your EHR and your MIPS reporting interface. Ask us to find out if we integrate with your EHR!
